

Formatting Data Citations - BibLaTeX Version

By LARS VILHUBER*

We illustrate how to create data citations with L^AT_EX and BibTeX.

The purpose of scientific publishing is the dissemination of robust research findings, exposing them to the scrutiny of peers. Key to this endeavor is documenting the provenance of those findings. For empirical articles, the foundations on which they reside are external to the article, and often to the journal, in which they are published. In consequence, there is a need to properly cite the digital inputs to our published output and to properly curate those inputs.

I. Data Citations

Properly referencing data goes beyond just reproducibility - it is also proper scientific writing style. In the same way that we use bibliographic references to “printed” resources, we should also be using such references for data resources, to give and receive credit where credit is due. Not referencing an article or book is at best an oversight, and at worst plagiarism - and the same should apply to data objects. Numerous guides and tutorials exist (ICPSR, Force11, DataONE (2011b)).

A. What to cite

In a nutshell, every dataset is to be cited. This is true for the main article as well as online appendices. In the past, use of data or code has been acknowledged in footnotes, and only rarely through bibliographic references. However, if the dataset is used, it should appear in the bibliography. The same is true for code reused from previous papers, or provided by authors.

B. How to cite

The AEA uses the Chicago style for citations and bibliographies (American Economic Association 2018). However, the Chicago Style Manual (Chegg 2018; Chicago Manual of Style Online 2018) does not provide examples for data citations, and neither does the Citation Style Language¹ used by applications like Zotero² and Mendeley Desktop³.

* Vilhuber: Cornell University, lars.vilhuber@cornell.edu.

1. <https://citationstyles.org/>

2. <https://www.zotero.org/>

3. <https://www.mendeley.com/download-desktop/>

DataONE ([2011a](#)) suggests content and style that resemble the generic working paper or article citation style (adapted to Chicago style):

Westbrook JW, Kitajima K, Burleigh JG, Kress WJ, Erickson DL, Wright SJ (2011) Data from: What makes a leaf tough? Patterns of correlated evolution between leaf toughness traits and demographic rates among 197 shade-tolerant woody species in a neotropical forest. Dryad Digital Repository. <http://dx.doi.org/10.5061/dryad.8525>

ICPSR (ICPSR [2018](#)) notes that a citation should include the following items:

- Title
- Author
- Date
- Version
- Persistent identifier (such as the Digital Object Identifier, Uniform Resource Name URN, or Handle System)

and provides a few examples, with some additional modifiers:

Esther Duflo; Rohini Pande, 2006, ‘‘Dams, Poverty, Public Goods and Malaria Incidence in India’’, <http://hdl.handle.net/1902.1/IOJHHX00LZUNF:5:obNHHq1gtV400a4T+Xrp9g==> Murray Research Archive [Distributor] V2 [Version]

Finally, the AEA style guide (American Economic Association [2018](#)) suggests

Leiss, Amelia. 1999. ‘‘Arms Transfers to Developing Countries, 1945–1968.’’ Inter-University Consortium for Political and Social Research, Ann Arbor, MI. ICPSR05404-v1. doi:10.3886/ICPSR05404 (accessed February 8, 2011).

C. Software

As part of our activities, the AEA prepress department has started the process of updating AEA templates available through such software.⁴

BIBTEX. — Users of BibTeX should consult the companion document.

4. For the technically inclined, this process involves updating an existing style or creating a new style on <https://citationstyles.org/> and <https://github.com/citation-style-language/styles>, from where it propagates to a large number of software packages.

BIBLATEX. — For users of BibLaTeX, both the `biblatex` package with option `style=chicago-authordate`

```
\usepackage[style=chicago-authordate,doi=true,backend=biber,natbib=true]{biblatex}
```

as well as the `biblatex-chicago` package with option `authordate`

```
\usepackage[authordate,backend=biber]{biblatex-chicago}
% to achieve natbib compatibility, optionally define these aliases
\newcommand{\citep}{\parencite}
\newcommand{\citet}{\textcite}
```

will yield satisfactory results, with one exception: Digital Object Identifier (DOI) should be formatted as the full URL. We achieve this with a minor modification:

```
1 % $Id: chicago-authordate-aea.sty,v 0.1 2018-10-03 18:06:54 vilhuber Exp $
2 % This is a biblatex style file, meant to correct the display of DOI
3
4 %%% change display of DOI fields
5
6 \DeclareFieldFormat{doi}{%
7   \ifhyperref
8     {\href{https://doi.org/#1}{\nolinkurl{https://doi.org/#1}}}
9     {\nolinkurl{https://doi.org/#1}}}
```

A generic BibLaTeX database entry might look like

```
@techreport{duflopande2006,
author = {Esther Duflo and Rohini Pande},
year = 2006,
title = {Dams, Poverty, Public Goods and Malaria Incidence in India},
institution = {Murray Research Archive},
type = {[Distributor]},
number = { UNF:5:obNHHq1gtV400a4T+Xrp9g== V2 [Version]},
note = {\url{http://hdl.handle.net/1902.1/IOJHHX00LZ}}
}
```

OR

```
@techreport{leiss1999,
author = {Leiss, Amelia},
year = {1999},
title = {Arms Transfers to Developing Countries, 1945--1968},
institution = {Inter-University Consortium for Political and Social Research},
type = {[distributor]},
number = {ICPSR05404-v1},
address = {Ann Arbor, MI},
note = {DOI: 10.3886/ICPSR05404 (accessed February 8, 2011).},
}
```

and thus generate “Duflo and Pande (2006a)” and “Leiss (1999a)” as well as

Esther Duflo and Rohini Pande. 2006a. *Dams, Poverty, Public Goods and Malaria Incidence in India*. [Distributor] UNF:5:obNHHq1gtV400a4T+Xrp9g== V2 [Version]. <http://hdl.handle.net/1902.1/IOJHHX00LZ>. Murray Research Archive

and

Amelia Leiss. 1999a. *Arms Transfers to Developing Countries, 1945–1968*. [distributor] ICPSR05404-v1. DOI: 10.3886/ICPSR05404 (accessed February 8, 2011). Ann Arbor, MI: Inter-University Consortium for Political and Social Research

when using standard “chicago-author-date” options to `biblatex`. Note the use of the `note` field to encapsulate the information.

A cleaner implementation:

```
@techreport{duflopande2006-new,
  author = {Esther Duflo and Rohini Pande},
  year = 2006,
  title = {Dams, Poverty, Public Goods and Malaria Incidence in India},
  institution = {Murray Research Archive},
  type = {[Distributor]},
  number = { UNF:5:obNHHq1gtV400a4T+Xrp9g== V2 [Version]},
  url = {http://hdl.handle.net/1902.1/IOJHHX00LZ}
}

and

@techreport{leiss1999-new,
  author = {Leiss, Amelia},
  year = {1999},
  title = {Arms Transfers to Developing Countries, 1945--1968},
  institution = {Inter-University Consortium for Political and Social Research},
  type = {[distributor]},
  urldate = {February 8, 2011},
  number = {ICPSR05404-v1},
  address = {Ann Arbor, MI},
  doi = {10.3886/ICPSR05404},
}
```

which will generate “Duflo and Pande (2006b)” and “Leiss (1999b)” as well as

Esther Duflo and Rohini Pande. 2006b. *Dams, Poverty, Public Goods and Malaria Incidence in India*. [Distributor] UNF:5:obNHHq1gtV400a4T+Xrp9g== V2 [Version]. Murray Research Archive. <http://hdl.handle.net/1902.1/IOJHHX00LZ>

and

Amelia Leiss. 1999b. *Arms Transfers to Developing Countries, 1945–1968*. [distributor] ICPSR05404-v1. Ann Arbor, MI: Inter-University Consortium for Political and Social Research. <https://doi.org/10.3886/ICPSR05404>
